APPLICATIONS

1. **Pharmaceutical** — Used as a primary active ingredient in antacids to neutralize stomach acid and as an osmotic laxative to relieve constipation.
2. **Water Treatment** — Acts as an effective alkaline agent to adjust and stabilize the pH levels of water in industrial and municipal treatment processes.
3. **Plastics and Polymers** — Incorporated as a flame retardant additive, it helps enhance fire resistance in various plastic and textile products.
4. **Chemical Manufacturing** — Serves as a high-purity precursor for the synthesis of other magnesium compounds and specialty chemicals.

STORAGE & HANDLING

Magnesium Hydroxide should be stored in a cool, dry, and well-ventilated area in a tightly sealed container to prevent moisture absorption. Maintaining these conditions ensures the chemical remains free-flowing and prevents potential degradation that could compromise its purity and shelf life.

- Store in a cool, dry place away from moisture.
- Use containers made of HDPE or glass to prevent contamination.
- Avoid exposure to incompatible materials such as strong acids.
- Ensure proper ventilation when handling to minimize dust inhalation.
- Use appropriate personal protective equipment (PPE) such as gloves and masks.
